**DEPARTMENT OF DEFENSE
DEPARTMENT OF THE AIR FORCE
FY 1997 BUDGET ESTIMATES**

EXECUTIVE SUMMARY

OVERVIEW

The Air Force continues to provide a balanced Information Technology (IT) program while making major strides in meeting critical base communications connectivity and Information Warfare needs. Air Force IT advancements center directly on three major goals: shaping tomorrow's Air Force, maintaining combat readiness, and supporting quality of life. Major emphasis is placed on transitioning from current to future readiness through prudent investment in modernization efforts. Increased IT funding in the FY 1997 Budget Estimates submission reflects tough choices made by the Air Force in meeting future C4I warfighting needs.

FUNDING CHANGES FROM AIR FORCE 1996/1997 BIENNIAL BUDGET ESTIMATES SUBMISSION:

Overall reporting for the Air Force IT budget has increased by \$600M (see Figure 1) in FY97 from the FY1996/1997 Biennial Budget Estimate to this FY97 Budget Estimates submission. Of this amount, \$206M is attributed to new funding for IT development/modernization efforts, primarily in the Base Information Infrastructure area, and an education process to properly categorize this funding. The remaining \$394M is the result of an aggressive education process to heighten reporting awareness and overcome widespread misconceptions about reporting requirements.

Reportable Information Technology Resources (\$B)

Figure 1. IT Resources.

New Funding for Base Information Infrastructure (BII). Of the \$418M for Core Defense Information Infrastructure (DII) IT development/modernization, \$137M is for Air Force BII, an \$58M increase from the FY1996/1997 Biennial Budget Estimate. Figure 2 shows the funding trend for Core DII Development/Modernization efforts. New funding for the Air Force's BII is driven by the Defense Planning Guidance (DPG) direction to ensure "a communications architecture that provides timely dissemination of battle management and intelligence information to deployed forces" and Air Force Programming Guidance that called for "adaptive, interoperable, C2 protected C4I systems and a modernized C4 infrastructure to support the warfighters." The Air Force met the DPG goal of 60 percent of installations upgraded during the first five years using the BII initiative. BII includes the Digital Switching System (DSS), Information Transport Systems (ITS), Combat Information Transport System (CITS) Management Subsystem (CMS), Base Network Control Center (BNCC) and Base Information Protect (BIP). DSS provides new digital switching equipment with standard interfaces and increased capacity to meet current and future mission requirements. DSS improves interbase/intrabase connectivity in order to provide wing war fighters the capability to rapidly "pull" worldwide information for mobilizing and deploying forces as needed. ITS addresses long-standing AF-wide base C4 communications deficiencies and is essential to expeditionary warfare. It provides a fiber-optic base C4 infrastructure to replace aging 1950's technology copper-based cabling and add new digital switching capabilities, creating a robust communications grid to all core facilities on Air Force bases. ITS will provide increased data capacity to meet the warfighters' evolving needs for imagery, graphics, and video information. CMS provides various services including collecting and archiving information on cable records, service orders, usage/billing, directory and operator assistance, and inventory control. The BNCC provides both internal and external circuit management and configuration control, as well as a centralized trouble-reporting point for all base data and voice circuits. BIP provides commercial-off-the-shelf (COTS) information protect tools for each Air Force base to detect, deter, isolate, contain, reconstitute and recover from information systems and network security intrusions and attacks. Further information on BII is provided in the Descriptive Summary section for CITS.

Reportable Information Technology Resources Core DII Dev/Mod (\$M)

Figure 2. Core DII Dev/Mod Funding.

New Funding for Integrated Maintenance Data System (IMDS). An additional \$14.4M and \$18.3M in new funding in FY96 and FY97 respectively was added for the IMDS. IMDS is the planned target migration system for three different aging maintenance systems: Core Automated Maintenance System (CAMS), Reliability and Maintainability Information System (REMIS), and Tactical Interim CAMS & REMIS System (TICARRS). It will provide a single virtual data repository in an open system client/server network. Further information on IMDS is provided in the Descriptive Summary section.

Improved Reporting for Base Level Units and Management Staffs. An aggressive education program undertaken by the Air Force identified \$463M in FY97 Information Technology budget funding which had not been reported previously. Figure 3 reflects the total reporting for Core DII and Functional Automated Information Systems (AISs) and the breakdown by Current Services and Dev/Mod expenditures. Many of our reporting organizations failed to include funding for base communications units, engineering and installations units, and management staffs at the headquarters and central design activity levels. This oversight was due

Reportable Information Technology Resources (\$B)

Figure 3. IT Funding by Core DII and Functional AISs.

to their misconception that the Exhibit 43 only captured automated information systems, and they failed to recognize the requirement to report non-system IT resources. Major Commands and Agencies were instructed to include all costs for non-system IT resources, with the exception of those associated with air traffic control, radar, radio, security, and command and control systems specifically exempted from the Exhibit 43. **The additional \$463M identified in FY97 was spread over most Corporate Information Management (CIM) areas in the IT-1, e.g., Command and Control and Core DII, and throughout all of the expense categories—hardware, software, supplies, TDY costs, etc.—causing significant differences between previous submission and this one (Figure 1).** In addition, over 6,600 additional work years were added to the Air Force's report. Again, the newly identified work years are for personnel located in base communications units, engineering and installation units, and management staffs. These workyears represent a wide range of tasks and include personnel typically considered "overhead" (e.g., management, policy, budget, secretarial). While FY97 is used as a point of

comparison for this Executive Summary, the Air Force added the newly identified funding to all fiscal years.

FORMAT CHANGES

There are several CIM area name changes from the previous report. Human Resources was renamed Civilian Personnel. CIM area Other was renamed and covered in five Core DII areas called Communications, Computing, Other, Related Technical Activities, and Value Added Services. Core DII are those Air Force information technology resources that ensure sufficient information infrastructure is available to fully support military forces. The Air Force's various interoperable, global networks provide high quality, voice, data and video communications services to the warfighter. Such networks ensure the availability of responsive and reliable command and control, intelligence, and support information when, where and how it is needed. Interconnected systems of computers, communications, data processing, security, and support resources, servicing the DoD's local and worldwide information needs, are the heart of the DII. Figure 4 show the relative funding for the five Core DII CIM areas.

Core DII - Communications. Core DII-Communications funds long haul communications and the base level communications infrastructure. The majority of the funding pays for "non-system" information technology resources. Payments for long-haul communications account for approximately \$300M per year. Base level communications account for another \$900M per year. Base level communications include both active and Air National Guard organizations, fixed, and engineering/installation resources. Base Realignment and Closure (BRAC) funding is under this CIM area and is below the IT-2 reporting threshold.

Core Defense Information Infrastructure (DII)

Figure 4. Core DII CIM Areas.

Core DII - Computing. Non-systems account for the largest portion of Core DII-Computing. The Air Force funds for two Major Shared Resource Centers under the DoD High Performance Computing Modernization Program. These computer facilities operate on a fee-for-service basis, providing super computer and mainframe computer processing, management information systems, and maintenance for hardware and software. The Air Force also transfers payments to the Defense Information Systems Agency (DISA) for base-level and logistics

information processing support. Computing resources in this functional area also support general-purpose Air Force requirements, including office automation.

Core DII - Other. Funding in Core DII-Other falls into two distinct areas. First, all information technology management staffs at HQ Air Force, Major Commands, and other organizations have been placed in this category. Second, this category includes all non-system visual information activities with the exception of videoteleconference facilities.

Core DII - Related Technical Activities. Funding in the Core DII-Related Technical Activities CIM area supports several small programs. These programs support participation and partnership with industry, national and international standardization activities. They provide specialized tools to research and analyze standardization needs and to support the planning and programming of standardization initiatives and efforts.

Core DII - Value Added Service. Core DII-Value Added Services includes funding for non-system videoteleconference facilities and network and systems management.

TRANSFER OF REPORTING

Several Joint Logistic System Center programs were transferred to the Air Force for reporting purposes by Office of the Secretary of Defense direction. The Ammunition Management Standard System (AMSS) is one of these systems and is highlighted in both the IT-1 and IT-2 Descriptive Summary. Two other programs not exceeding the reporting threshold are Continuous Acquisition and Life Cycle Support New Technology (CALS-TECH) and Major End Item Logistic System (MEI).

FINAL NOTE

Over the past year, the Air Force has been using a new Microsoft Windows-based client-server automated system to collect and report the Information Technology budget. This new user-friendly database system has decreased the input workload on the Air Force users, enabling them to devote more time to creating an accurate product. POCs for the Air Force Information Technology Budget are Lt Col Mark Hall and Capt Richard Hubbard, 703-697-8890.

NOTE 1: Military Personnel Cost in the DBOF is computed at the equivalent civilian rate as prescribed by the DBOF Guidance.

NOTE 2: FY 1995 estimates reflect a \$50 thousand investment/expense threshold, FY 1996 reflects a \$100 thousand investment/expense threshold as adjusted by Congress (Section 8065 in Public Law 104-61), and for FY 1997, appropriated funds will adhere to the centrally managed criteria in that the Department will budget for the purchase of noncentrally managed items (by definition installation/local level type items) in the O&M appropriation regardless of the unit cost of the item. DBOF will maintain the \$100 thousand threshold for FY 1997 and beyond.

FY 1997 Budget Estimates

CHANGES FROM 1996 PRESIDENT'S BUDGET SUBMISSION:

1. The following CIM Functional Areas were not used in this 1997 Budget Estimates submission:

CIM AREA

Atomic Energy
Economic Security
Health
Policy
Reserve Affairs

2. The following CIM Functional Areas have been added to the 1997 Budget Estimates submission:

CIM AREA

Economic Security
Intelligence
Military Personnel and Readiness

3. The following CIM Areas have been renamed:

CIM AREA

Human Resources

- renamed Civilian Personnel

Other

- renamed to Core DII and split into five categories

Core DII - Communications (includes Base Realignment and Closure (BRAC))

Core DII - Computing

Core DII - Other

Core DII - Related Technical Activities

Core DII - Value Added Services

DEPARTMENT OF THE AIR FORCE
Descriptive Summaries
FY 1997 Budget Estimates

CHANGES FROM 1996 PRESIDENT'S BUDGET SUBMISSION:

1. The following initiatives/systems have been added as first-time narrative description submissions to the 1997 Budget Estimates:

<u>AIS TITLE</u>	<u>AIS CODE</u>
Combat Information Transport System (CITS).....	040
Standard Base Level Computer (SBLC) Upgrade/Phase IV Support.....	152
Ammunition Management Standard Systems (AMSS)	FNM
Weather Communications Systems (WCS).....	YKA

2. Narrative descriptions for the following initiatives/systems were deleted in the 1997 Budget Estimates submission. In each case, the initiative/system still has reportable funding, but now falls below the \$10 million threshold for required narratives.

<u>AIS TITLE</u>	<u>AIS CODE</u>
Stock Control & Distribution System (SC&D)	006
Reliability and Maintainability Information System (REMIS)	012
Computer Aided Design System (CADS)	YKD

3. Funding for the Defense Data Network (DDN) has been combined with the Defense Message System - Air Force (DMS-AF).

4. The following systems have been renamed:

<u>AIS TITLE</u>	<u>AIS CODE</u>
Defense Civilian Personnel Data System (DCPDS) Modernization	113
- renamed Defense Civilian Personnel Data System (DCPDS) Modernization - Air Force	
Base Level Systems Modernization (BLSM)	153
- renamed Global Combat System Support - Air Force (GCSS-AF)

C. Life Cycle Cost and Program Cost:

1. Then year (Inflated) dollars

Approved Life-cycle cost:	\$ 0	(in millions of dollars)
Estimated Life-cycle cost:	<u>\$ 0</u>	(in millions of dollars)

Approved Program cost:	\$ 0	(in millions of dollars)
Estimated Program cost:	<u>\$ 0</u>	(in millions of dollars)

2. Constant base year (FY 1995) dollars

Approved Life-cycle cost:	\$ 0	(in millions of dollars)
Estimated Life-cycle cost:	<u>\$ 0</u>	(in millions of dollars)

Approved Program cost:	\$ 0	(in millions of dollars)
Estimated Program cost:	<u>\$ 0</u>	(in millions of dollars)

3. Sunk Cost (actual): \$ 0 (in millions of dollars)

4. Cost To Complete: \$ 0 (in millions of dollars)

Note: Refer to the CPMS DCPDS Exhibit 43 (IT-2) for DCPDS life cycle cost and program cost. The cost shown in the Air Force's IT Budget, Exhibit 43 (IT-1) is funding to support Air Force initiatives for this system.

D. Cross Reference to Justification Books:

FY 1997 President's Budget, Volume 1, O-1, BA 4, AG41

FY 1997 President's Budget Procurement Book, Other Procurement Air Force, Electronics and Telecommunication Equipment (Exhibit P-40), P-1 Item Number 49, Pages 39-42

E. System Description:

This submission is for the AF's deployment, hardware/software cost and maintenance of the DoD approved Defense Civilian Personnel Data System (DCPDS) modernization and AF's regionalization of civilian personnel support. Reporting requirements for the Major Automated Information Systems Review Committee were developed by DoD and the data is presented quarterly.

DoD capitalized the AF data system in Feb 91 and named it the migration system, DCPDS, for civilian personnel DoD-wide. AF development and modernization funding was subsequently captured by DoD and none of the funding would have been programmed by AF across the FYDP. Although the funding was issued to the AF for its portion, control and oversight will be provided

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

by the DoD Program Management Office. Central procurement is to be accomplished by the AF CDA who acts as the executive agent for DoD. As part of the Civilian Personnel Management Service (CPMS) and to provide technical oversight, the Technical Implementation Manager (TIMPL) is co-located with the CDA and reports directly to CPMS.

DCPDS modernization is interrelated with the regionalization of civilian personnel operations. The Senior Financial Oversight Council (SFMOC) concluded in Nov 94 that DCPDS modernization was necessary to achieve the savings anticipated by regionalizing civilian personnel. The Nov 93 Program Decision Memorandum (PDM) directed the Services and DoD agencies to develop regional processing centers. A Program Budget Decision validated the regionalization concept. The DoD-wide Civilian Personnel Regionalization and Systems Modernization program provides for a reduction in the number of civilian personnel employees through the application of servicing ratios. Air Force must deliver regionalized services on time since the manpower reduction have been levied. In conjunction with the development and deployment of a modern, standard data system, the regionalization of civilian personnel services, will provide the streamlined civilian personnel delivery afforded by more efficient and effective organizational structures and business process improvements. The equipment/systems being purchased will allow the Air Force to accomplish regionalization and servicing ratio goals by reengineering, streamlining, and automating personnel administration and management. Initially, two proof-of-concept regional centers were established in FY95. One center is owned by AF Space Command and located at the AF Academy in Colorado Springs, CO and services approximately 8,000 employees at 7 locations. The other center is owned by Air Mobility Command and located at Scott AFB IL and provides service to approximately 13,000 employees at 11 locations. FY95 funds provided for the computer hardware needed to get these two centers up and running and also provided initial start-up costs for the Air Force center at Randolph AFB TX. The proof-of-concept centers will phase down by the end of FY97. All operations will be phased to the Air Force Personnel Center (AFPC) at Randolph AFB TX. AFPC will provide support to all AF civilians by FY99. FY96 buys equipment to stand up the AFPC. FY97-98 funds will purchase computer hardware, to include microcomputers, servers, printers, storage devices, networking support, associated peripheral devices, and software to establish the center and to provide equipment for approximately 100 Civilian Personnel Offices at base level. Typically needed will be new servers at each personnel office, a server for AFPC, LAN hardware and installation at each personnel office and AFPC, and hardware and installation for an AF-wide area network to ensure timely and accurate data are available to conduct daily personnel activities. State-of-the-art desktop equipment is needed to meet operational demands to achieve maximum efficiency and times savings and to maintain customer service at an acceptable level despite the significant reductions in civilian personnel employees. The equipment will support electronic records management systems, several Functional Process Improvements, and electronic management of Official Personnel Folders. It is estimated that streamlining, reengineering, and automation will save approximately \$72M a year.

Migration Status:

DCPDS is an OSD migration system. It replaced the Personnel Data System-Civilian (PDS-C).

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: This is a new program start in FY95. In Nov 94, the SFMOC approved the modernization of DCPDS. As mentioned, DoD controls DCPDS. Any development

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

and modernization funding will be programmed by CPMS.

2. FY 1996 Planned Program: AF submitted acquisition plan to DoD in Aug 95 and it was approved in Sep 95.

3. FY 1997 Planned Program: AF submitted acquisition plan to DoD in Aug 95 and it was approved in Sep 95.

G. Contract Information:

N/A

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: Not applicable. New submission.

2. Schedule Changes: Not applicable. New submission

3. Cost Changes: The AFPC began stand-up in FY96 with operational capability in FY97 as personnel offices begin to obtain AFPC servicing. AFPC will provide support to all AF civilians by FY99. This was a new program start in FY95; therefore, funding shown for FY95 in this submission was not identified in the FY96 President's Budget Submission.

B. CIM Functional Area:

CORE DII - COMMUNICATIONS

C. Life Cycle Cost and Program Cost:

1. Then year (Inflated) dollars

Approved Life-cycle cost:	\$ 0	(in millions of dollars)
Estimated Life-cycle cost:	<u>\$ 0</u>	(in millions of dollars)

Approved Program cost:	\$ 0	(in millions of dollars)
Estimated Program cost:	<u>\$ 0</u>	(in millions of dollars)

2. Constant base year (FY 19) dollars

Approved Life-cycle cost:	\$ 0	(in millions of dollars)
Estimated Life-cycle cost:	<u>\$ 0</u>	(in millions of dollars)

Approved Program cost:	\$ 0	(in millions of dollars)
Estimated Program cost:	<u>\$ 0</u>	(in millions of dollars)

3. Sunk Cost (actual): \$ 0 (in millions of dollars)

4. Cost To Complete: \$ 0 (in millions of dollars)

Note: CITS cost outline in AIS 040 does not include Defense Message System-Air Force (DMS-AF). Base Information Digital Distribution System (BIDDS) program completed FY95. Estimated Life Cycle Cost and Program Cost are expected next reporting period.

D. Cross Reference to Justification Books:

FY 1997 President's Budget, Volume 1, O-1, BA 3, AG32 and BA 4, AG41

FY 1997 Amended Budget Submission, Other Procurement Air Force, Electronics and Telecommunication Equipment (Exhibit P-40), P-1 Line Number 64

E. System Description:

CITS is a subset of the Base Information Infrastructure (BII), beginning in FY96. The overall objective of CITS is to acquire and connect information transport, networking, and protect capabilities to meet the uninterrupted day-to-day, crisis, and wartime information transport needs of the operating commands, functional areas, and the base population in general, Air Force-wide. This includes an integrated voice and data digital switching system (DSS), information transport system (ITS), automated record keeping systems, network management systems, and Voice Processing Systems (VPS). The CITS program will also include other capabilities needed to support the information transport requirements of the base's mission, such as local area networks (LANs), premise terminal equipment, and consolidated management of follow-on operations and maintenance responsibilities (e.g., maintenance services), and incorporating planned technology

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

enhancements (i.e., Synchronous Optical Network (SONET), Asynchronous Transfer Mode (ATM), etc).

Migration Status:

CITS is a Core Defense Information Infrastructure program and is not assigned a migration status. It does, however, comply with current Defense Planning Guidance to upgrade base level communications infrastructure.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: Released the Regional Distribution System contract for the installation of fiber optic cable. Released the CITS Management System (CMS) contract for the automated switch record keeping. Installed telephone switches and fiber optic cable, as part of BIDDs, at several Air Force installations in keeping with the CITS implementation schedule.
2. FY 1996 Planned Program: Continue with the installation at 6 USAF bases of telephone switches, fiber optic cable, and the CMS as outlined in CITS Implementation Schedule.
3. FY 1997 Planned Program: Continue with the installation at 9 USAF bases of telephone switches, fiber optic cable, and the CMS as outlined in CITS Implementation Schedule.

G. Contract Information:

PMD 0026(9)/PE 33112, Program Management Directive for Combat Information Transport System (CITS) (Telecommunications IWM Program)

Unified Local Area Network Architecture (ULANA) II, F34608-94-D-0011 (ID/IQ), two contracts awarded on 31 Mar 95 to EDS Herndon, VA, and TRW Systems Integration Group.

Regional Distribution Systems (RDS): Contract awarded, Apr 95. The RDS contract provides installation for base-level distribution system (fiber) at CONUS bases.

CITS Management System (CMS) contract awarded to ANSTEC, Fairfax, VA, which provides the interfacing to base digital switching systems and automating billing/accounting, directory service, inventory management, manpower accounting, and record management.

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: Not applicable. New submission.
2. Schedule Changes: Elimination of CMS installations at all bases for FY96 due to budget limitations.
3. Cost Changes: Increases in FY97 funding reflect USAF/CV guidance to MAJCOMs in the AF FY97-01 POM Guidance Memorandum on USAF Information Protection (Info Protect) initiative at USAF's BNCCs for proper tools and system administrator training. In FY96 two program offices, CITS and BIDDs, are consolidating which reduce the 3400 funding.

Approved Program cost:	\$ 4.4	(in millions of dollars)
Estimated Program cost:	<u>\$ 4.4</u>	(in millions of dollars)

3. Sunk Cost (actual): \$ 520 (in millions of dollars)

4. Cost To Complete: \$ 92 (in millions of dollars)

Note: The reporting reflects acquisition, development, and continued sustainment cost, primarily provided through a contract.

D. Cross Reference to Justification Books:

FY 1997 President's Budget, Volume 1, O-1, BA 1, AG 11 and BA 2, AG 21

E. System Description:

This program provides day-to-day sustainment and operations for 89 Air Force installations and 101 Air National Guard and Air Force Reserve installations by providing flightline maintenance, supply, accounting and finance, budget, military and civilian personnel, transportation, operations, and services systems. The contractual vehicle that supports the SBLC environment is the Phase IV Follow-On contract. This contract allows our customers to purchase hardware, software, maintenance, support and upgrades. The Delegation of Procurement Authority (DPA) limit is \$612M.

The Standard Systems Group (SSG) is the Central Design Activity for SBLC.

Migration Status:

SBLC is a Core Defense Information Infrastructure system and is not assigned a migration status.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: Funding went towards the sustainment of the Phase IV Follow-On contract which is composed of various contract line item numbers (CLINs). Those CLINs are divided into three main categories: Maintenance, Support, and Upgrades. The particular CLINs are Data, Programmer/Analyst Support, Training, Site Equipment, Installation, Transportation and Packaging, Basic System Support, Small Systems Support, Micro System Support, System Software, Air Force Rapid Deployment Program (AFRDP), Government Maintenance Support, Special Studies, Analyses and Tests, and Other Direct Cost associated with SBLC.
2. FY 1996 Planned Program: Continued DPA expenditures for maintenance, support, and upgrades.
3. FY 1997 Planned Program: Continued DPA expenditures for maintenance and support. Phase IV Follow-On Contract expires 27 Jan 97.

G. Contract Information:

The prime contractor for SBLC is UNISYS Government Systems, Inc. The Phase IV Follow-On Contract (F01620-91-D-0003) is a firm fixed price, indefinite quantity, indefinite delivery type contract that was awarded Jul 91. The duration of the contract is six years and its estimated value is \$612 Million.

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: Not applicable. New submission.
2. Schedule Changes: Not applicable. New submission.
3. Cost Changes: No significant cost changes.

E. System Description:

GCSS-AF was previously called Base Level Systems Modernization (BLSM). GCSS-AF is the program that will modernize the key base level systems to provide essential support to the mission of the Air Force in the areas of supply, maintenance, civil engineering, base accounting and finance functions, personnel and manpower management, and a variety of related services. GCSS-AF will move the Air Force into the 21st Century with the technology that will provide the warfighter with state-of-the-art information required to be successful in all scenarios. It will additionally provide Situational Awareness advances in information-based technology that will allow military forces to monitor and assess global conditions rapidly and efficiently. It will provide enabling technology to support the Air Force and the DoD Business Process Reengineering. It is a three-tiered approach that includes a functional, data, and technical modernization of Air Force base level Automated Information Systems (AIS's) and the processes that those AIS's support. GCSS-AF modernization will involve code translation, data base

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

modernization, technical modernization, and business process improvement modernization as dictated by a Functional Economic Analysis of each existing and proposed business process. GCSS-AF will provide a system of systems supported by a single logical wing-level data base. The GCSS-AF infrastructure and data base will be the information base for modernizing all Air Force support functions and will become the source of data for command and control and decision support systems that support the wing commander and theater battle staff. GCSS-AF will integrate the base level combat support systems which are essential to allow non-ambiguous real-time decision support to the objective of the Wing Commander as well as support the One Wing, One Base, One Boss concept. Systems modernized under GCSS-AF will be migrated to an open system environment to reduce maintenance cost and integrate the many stove-pipe systems into one integrated management information system of applications which is designed to support both regional and distributed topologies. GCSS-AF will improve operational readiness, enhancing the capabilities and timeliness of all Air Force standard AIS's supporting critical warfighting weapon systems. GCSS-AF will ensure the availability of critical decision making information that is required at the Point-Of-Attack for all Air Force operational commanders. Logistics support cost will be reduced with an increase in productivity. The GCSS-AF program will enable the Air Force to create adaptable software to support high priority activities satisfying existing functional requirements, enabling new base level requirements for new weapon systems such as the B-1, B-2, F-22, and C-17 to be added with minimum effort and expense. GCSS-AF will incorporate improvements identified through the functional process improvement Integrated Computer-Aided Manufacturing Definition (I-DEF) methodology. GCSS-AF will ensure continued support of mission essential Air Force base level management information systems to beyond the year 2000.

Migration Status:

GCSS-AF is a Core Defense Information Infrastructure program supporting the migration of targeted systems for base level information system modernization.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: Fielding of Prototypes Logistics Module-Base Level (LOGMOD-B) which provides Operations Plans logistics information (personnel, supplies and equipment) for deployment, crisis planning and execution to MAJCOM, HQ USAF and the Joint arena, Air Force Operation Resource Management System (AFORMS) which tracks all flying training information for all Air Force personnel on flying status and provides this information to the Director of Operations this system implements Public Law, DoD and Air Force policy for flight management and Manpower Data Systems (MDS) which provides manpower information (authorizations) for war planning is proceeding to full implementation. GCSS-AF AFSARC IPR program review and Pre-MAISRC briefing was accomplished with full MAISRC completed Sep 95, and the GCSS-AF ASP and Draft RFP was released. The full Air Force Wing Level Integration Definition Modeling (DEF) was completed result being the To Be Model.

2. FY 1996 Planned Program: RFP released Dec 95. Milestone II review, and paper MAISRC to allow for the continuation of the GCSS-AF Modernization effort, and continue for the full implementation of the initial three AIS's LOGMOD-B, AFORMS, and MDS which will provide state-of-the-art information processing systems to the warfighter in crisis action, planning and execution.

3. FY 1997 Planned Program: Implementation of MDS.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

G. Contract Information:

OGDEN Services is now the prime contractor for the remaining effort under GCSS-AF, Harris Data Services Inc is now a sub to OGDEN. The RFI was advertised in the Commerce Business Daily and placed on the SSG Bulletin board on 24 Nov 93. GCSS-AF has received feedback that will be useful as alternatives are considered. Per the amended Program Management Directive a draft request for proposal was released on 29 Jun 95, and the final RFP was released on 13 Dec 95 at approximately 0400 hours. Contract award is scheduled to occur in the third quarter FY96.

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: There have been no technical changes.
2. Schedule Changes: There are no anticipated schedule changes as a result of additional funding, the program has been traditionally underfunded since its inception, additional funding would only keep the program on schedule. Following are the projected implementation milestones for the 3 initial AIS's (LOGMOD-B, AFORMS and MDS). LOGMOD-B and AFORMS are projected to reach full implementation in mid FY98, MDS is projected to reach full implementation in late FY97.
3. Cost Changes: Changes in approved program cost is a result of funding plus ups by Air Staff in accordance with the program disconnects submitted in the FY97 Program Objective Memorandum. Changes in the estimated cost is a result of a new LCCE being accomplished by another contractor (Tecolote). Required and approved funding levels will allow the software system architecture (the engine) to be available for the full modernization of the base-level AIS's, the required support and fielding of the GCSS-AF AIS's (LOGMOD-B, AFORMS, and MDS). The Air Force will be allowed to move into the 21st Century by eliminating the stove pipe systems currently employed with information fragmented across many individual systems. The One Base, One Wing, One Boss concept will be realized. The warfighter will have state-of-the-art information technology that will be required to be successful in all scenarios. Additionally, Situational Awareness advances in information-based technologies that will allow military forces to monitor and assess most global conditions rapidly and efficiently will have a vital part.

FY 1997 Budget Estimates

Budget Automated System (CBAS) workloads to DMC's; and complete the consolidation of Central Design Activities (CDA) SBLC maintenance/development processing to a single site. In addition to the taskings reflected above (i.e., OCONUS regionalizations, WIMS/SIMS/BCAS and CBAS), the PM must include an assessment on developing a contingency backup capability with DISA, establishing and implementing standard procedures and operating policies for SBLC support with DISA; assisting DISA in planning and providing technical support environment and an on-going liaison function with the Air Force SBLC Central Design Activity (CDA); work with DISA to establish a Configuration Control Board (CCB)' continue as the MAJCOM NON-C2 configuration manager and establish a NON-C2 RPC contingency backup capability; identify and address interoperability issues and interfaces in technical solutions; and continue with the Training Planning Team (TPT) to develop/modify the System Training Plan (STP). Work with AETC to identify training support requirements to include equipment (hardware and software), unique support equipment, technical data, etc., for life cycle training.

Standard Systems Group (SSG) is the Central Design Activity for ADP Operations Consolidation.

Migration Status:

The ADP Operations Consolidation is a DoD directed consolidation and is an OSD approved system.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: The ADP Operations Consolidation Program has completed CONUS SBLC consolidation. A total of 68 SBLC base level workloads were migrated during the program. The Langley X2 workload was migrated to DMC Montgomery. 4 of 14 CBAS sites, (Langley, AFRES, AFDW and SPACECOM), were migrated. In PACAF, all sites have been migrated to the RPC at Pearl Harbor NAS, HI. In USAFE, all migrated but one site (Incirlik, TU). Non-C2 workloads from HQ ACC and HQ AFSOC were migrated to the Scott RPC. This action completes MAJCOM Non-C2 consolidation. This effort eliminated seven mainframe and nine minicomputer systems, and currently provides processing support for 31 MAJCOM/SOA/FOA organizations at Scott RPC. This office is expected to assume life cycle management responsibilities for the Non-C2 future activities. In the WWMCCS area, all non-C2 applications on WWMCCS equipment were and all 19 sites have been migrated to the Scott RPC.

2. FY 1996 Planned Program: In USAFE, the SBLC workload for Incirlick will be migrated to the Ramstein RPC. This site is expected to be migrated by FY 2/96. The Economical Analysis for WIMS/SIMS/BCAS will be completed. SSR will become the Life Cycle Manager for the Non-C2 program.

3. FY 1997 Planned Program: Continuation of WIMS/SIMS/BCAS implementation. Serve as Life Cycle Manager of the Non-C2 program.

G. Contract Information:

SBLC, Unisys, Phase IV Follow-On Contract, FP, DPA=KMA
WIMS/SIMS/BCAS, PRC, Navy Super-Mini Contract, FP
MAJCOM NON-C2, HFSI, Air Force MAJCOM Contract, FP

Descriptive Summary
FY 1997 Budget Estimates

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: No significant technical changes.
2. Schedule Changes: No significant technical changes.
3. Cost Changes: The decrease in funding from FY95 to FY96 reflects the completion of PMD 2208(1) taskings and the new PMD 2208(2) taskings starting in FY96. The new FY96 and FY97 funding, not in the FY96 Budget Submission, shows the new taskings under PMD 2208(2) as described in Section E above.

FY 1997 Defense Budget Review, Defense Business Operations Fund, Information Services
Business Area, pages 147 - 174

E. System Description:

WCS incorporates various weather systems: Communications Front End Processor (CFEP), Automated Digital Facsimile System (ADFS), Geostationary Operational Environmental Satellite (GOES), Continental Meteorological Data System (COMED), and the Automated Weather Network (AWN), which is comprised of the Automatic Digital Weather Switch (ADWS), the Global Weather Intercept Program (GWIP), and the Weather Intercept Control Unit (WICU). WCS supports collection and dissemination of weather mission data needed for weather products and Notice to Airman (NOTAM) flight safety information, used in support of the Secretary of Defense Special Missions; Chairman Joint Chiefs of Staff (CJCS); all CINCs and their operational forces; all services, Non-DoD agencies (FAA, NASA, National Weather Service, etc.) has agreements with DoD. WCS provides the following capabilities:

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

(a) AWN - Global Weather Communications System composed of ADWS, WICU, and GWIP.

(1) ADWS - Provides communications from three sites, Hickam AFB HI, RAF Croughton UK, and Tinker AFB OK. The Hickam ADWS relays environmental data from Pacific sources to the Tinker ADWS hub. RAF Croughton ADWS relays data from European sources to Tinker. Tinker hub receives alphanumeric weather information from the National Weather Service, Federal Aviation Administration, and other civil and military sources as well as weather stations world wide, stores and forwards alphanumeric data to the CFEP at HQ Air Force Global Weather Central (AFGWC), Offutt AFB NE. The three ADWSs provide alphanumeric weather data and NOTAMS data to support peacetime operations and CJCS directed operations world-wide.

(2) GWIP - A high frequency program that collects foreign source environmental data, not available from other sources, such as data from CIS, China, India, South East Asia and Africa. This data is required for weather bulletins supporting DoD Strategic Programs, the National Military Command Center, the USAF Command Post, operational commands, worldwide operations for the US Navy numbered fleets, and select civilian agencies. GWIP authority includes Memorandum, Deputy SecDef to AFCC, 12 Nov 64; AFCC DAR J-76-2; and AFCC DARJ-78-2.

(3) WICU - Data concentrator that takes data from low speed teletype circuits originating at weather intercept sites and concentrates this input into medium speed data stream. WICU replacement (WICU-R) will replace the WICU minicomputers with personal computers located at each GWIP site. WICU-R provides the termination point for the associated GWIP circuits, precludes the loss of data through storage capability, concentrates the data onto high speed circuits, and relays the data to an ADWS. Currently, there are three WICU sites located at RAF Croughton UK, Pruem AS GE, and Yokota AB JA. WICU is a critical communications component of the GWIP. The approval documents for the WICU-R program are CSRD MAC Scott 89-5510 and CSRD AFCC MU 90-6010.

(b) CFEP - Communications interface for HQ AFGWC weather computer complex which, as an AWN node, delivers graphics products and selected satellite imagery to customers worldwide. As the Hub for AWDS and AF Digital Graphics System (AFDIGS), CFEP ingests products from the National Weather Service, Navy's Fleet Numerical Meteorological Center and systems at AFGWC, reformats these products and broadcasts them to sites worldwide. CFEP consists of two UNISYS 2200 series mainframe computers at Offutt AFB NE and a Distributed Communications Processor in each theater. Each ADWS consists of two UNISYS 1100 series mainframes. CFEP and all three ADWS's maintain one system on-line and the other as a fully redundant backup. WICU consists of six Perkin-Elmer mini computers. GWIP consists of antennas and high frequency receiver equipment. WCS allows time perishable foreign and domestic weather data to be supplied to AFGWC, turned into weather products, and disseminated to AF flying units worldwide.

Migration Status:

None.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: 1 Oct 94, Follow-on Contract Award, HQ CSC/SDFM CFEP; 1 Dec 94 CFEP processor upgraded to 2200/444, 38 EIW/SDFM; 30 Apr 95, WGS functions migrated to CFEP and WGS equipment to DRMO, 38 EIW/SDFM; 1 Aug 95, M9760 disk system installed and 8481 disk systems to salvage, HQ SSG OL-B/SDFM.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

2. FY 1996 Planned Program: WICU: Dec 95, Planned WICU-R operational testing, HQ SSG OL-B/SDF; Mar - Sep 96, Planned installation of WICU-R, HQ SSG OL-B/SD; FADWS: Establish a Unisys 2200 series test bed at Tinker ADWS site. CFEP: CFEP processors upgraded to 2200/464 with GFE. ADFS USAF owned equipment, 10 years old and complicated to use, will be replaced and integrated with the GOES replacement equipment which is currently leased. The overall efforts involve replacing old equipment and integrating functionality into fewer user systems.

3. FY 1997 Planned Program: WICU-R fully operational. Minicomputer maintenance discontinued. ADWS: Upgrade Tinker ADWS from Unisys 1100 to 2200 series processor. CFEP: Replace DCP-40 and DCP-35 with a single DCP-624. Discontinue leases in early FY97 for AFIGS and COMEDS.

G. Contract Information:

Weather Communications Systems (WCS) utilize the following contracts:

Tinker ADWS (Tinker, Croughton, and Hickam)

Prime Contractor: UNISYS Corporation

Contract #: F34608-95-C-0003

Contract Award: Dec 94

Contract Type: Firm Fixed Price (FFP)

Duration: 9 Months (1 ea 6 Month Option)

Estimated Value: \$3.588M

Services Provided: Hardware maintenance, software lease, systems analyst support (4), travel and subsistence for analyst and training.

SOUTH AMERICAN WEATHER DATA:

Prime Contractor: United Airlines

Contract #: F34608-95-C-0006

Contract Award: 1 Feb 95

Contract Type: FFP

Duration: 5 Years (4 Options)

Estimated Value: \$10.047M

Services Provided: South American Weather Data

ARINC DATA:

Prime Contractor: Aeronautical Radio Inc.

Contract #: F34608-95-C-0002

Contract Award: 1 Dec 94

Contract Type:

Duration: 5 Years (4 Options)

Estimated Value: \$141K

Services Provided: Specialized weather and flight information (Aircraft Reports (AIREPS), Pilot Reports (PIREPS), and Coded Aircraft Reports (CODARS)) required by all DoD flying and tactical operations.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

CFEP:

Prime Contractor: UNISYS Corporation

Contract #: F01620-92-C-0003

Contract Award: Dec 91

Contract Type: FFP

Duration: 5 Years (4 Options)

Services Provided: Hardware maintenance, software, and system analyst support.

GWIP/WICU:

Prime Contractor: Telos Corporation

Contract #: F61708-93-D-3008

Contract Award: Oct 93

Contract Type: FFP

Duration: 3 Years (2 Options)

Estimated Value: \$312K

Services Provided: Hardware maintenance, WICU RAF Croughton UK

Prime Contractor: Telos Corporation

Contract #: F61517-93-D-0010

Contract Award: May 93

Contract Type: FFP

Duration: 3 years (2 Options)

Estimated Value: \$118,325

Services Provided: Hardware maintenance, WICU Pruem AS, GE

Prime Contractor: Telos Corporation

Contract #: F62562-95-C-9017

Contract Award: Oct 94

Contract Type: FFP

Duration: 3 Years (2 Options)

Estimated Value: \$387K

Services Provided: Hardware maintenance, WICU Yokota AB, JA

Automated Digital Facsimile System (ADFS): A Class Justification and Approval to extend the ADFS Contract to Jan 97 was submitted. An initiative to field a replacement system by Jan 97 is underway. Working a consolidated Statement of Work (SOW) to replace the current system as it is known today. Contract Number: DCA200-94-C-0086. This is a maintenance contract for GFE.

Air Force Digital Graphics System (AFDIGS): A Class Justification and Approval to extend the AFDIGS Contract to Jan 97 was submitted. An initiative to field a replacement system by Jan 97 is underway. Working a consolidated SOW to replace the current system as it is known today. Contract Number: DCA200-87-C-0015. This contract is for equipment, software, maintenance and communications.

Continental Meteorological Data System (COMEDS): A Class Justification and Approval to extend the COMEDS Contract to Jan 97 was submitted. An initiative to field a replacement system by Jan 97 is underway. Working a consolidated SOW to replace the current system as it is known today. Contract Number: DCA200-91-D-0019. This contract is for leased equipment, software, maintenance and communications.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: Not applicable. New submission
2. Schedule Changes: Not applicable. New submission.
3. Cost Changes: Increase in FY96 is to purchase equipment to replace existing systems which support consolidation of functions on fewer user systems. FY97 decreased funding shows the termination of two lease agreements in early FY97 for AFDIGS and COMEDS.

3. Sunk Cost (actual): \$ 11.26 (in millions of dollars)

4. Cost To Complete: \$183.72 (in millions of dollars)

Note: These are Air Force only costs for DMS.

D. Cross Reference to Justification Books:
FY 1997 President's Budget, Volume 1, O-1, BA 4, AG 42
Procurement Program, Fiscal Years 1997 Budget Estimates, Other Procurement, Electronic and
Telecommunications Equipment, Item # 60, Weapon System Cost Element 2.

E. System Description:

The DMS program is a DoD downward directed program to provide an improved communications messaging system to all users. DMS-AF is the Air Force portion of the program (IAW HQ USAF/SCMB Program Management Directive (PMD) 0933(2)) which implements the jointly developed DoD DMS target Architecture and Implementation Strategy (TAIS). The objectives of the program is to provide a secure writer-to-reader messaging system to improve war-fighting support, faster delivery to users, standard software and hardware platforms, migration to X.400/X.500 international messaging standards, and to phase out obsolete, disjointed, expensive-to-maintain and manpower-intensive AUTODIN communications systems. DMS-AF is a HQ USAF/SC top-priority program. It directly supports the DMRD 968 initiative to save money and manpower in Base Communications Center (BCC) operations by evolving to writer-to-reader services for organizations and individuals. The DMS-AF Program Management Office (PMO) has been the leader in phasing out manpower-intensive and obsolete AUTODIN equipment. The

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

DMS-AF PMO was the first DoD service or agency to develop and implement a 1988 GOSIP X.400 Base Message Host (BMH) prototype messaging capability. The BMH prototype, is currently being implemented at Maxwell AFB, Gunter Annex, Scott AFB, and 21 Air Combat Command bases. This systems provides the capability to gateway between AUTODIN, GOSIP X.400 and SMTP messaging systems. In addition, because of the prototyping and experience gained by the DMS-AF PMO, the Air Force was selected by OSD and DISA to be the lead service in the implementation of X.400 messaging. The DMS-AF PMO awarded a contract on 1 May 95 to provide a complete suite of DMS GOSIP-compliant X.400 messaging components. This contract will provide software products to support all aspects of X.400 messaging from writer-to-reader. Using this contract, all DoD Services and Agencies can purchase the products needed to implement X.400 messaging worldwide and phase out the obsolete, manpower-intensive, and expensive-to-maintain AUTODIN systems. This will save millions of O&M dollars and 450 Air Force manpower authorizations from FY95 to FY99.

Migration Status:

DMS is an OSD migration system -- replaces AUTODIN and BCCs.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: Implemented Base Message Host software at 21 ACC bases. Awarded a DMS-GOSIP contract to Loral Federal Systems to provide DMS messaging components and software to be implemented DoD wide.
2. FY 1996 Planned Program: Perform site surveys at 22 bases for network connectivity to support DMS customers. The surveys will be based on the superhighway 2000 base priority list. Plan to implement and test DMS components and software at 10 IOT&E sites.
3. FY 1997 Planned Program: Perform site surveys at 18 bases for network connectivity to support DMS customers. Implement products from the DMS-GOSIP contract at 24 bases.

G. Contract Information:

F01620-93-D-0001/F01620-93-D-0002 Desktop IV- Purchase PCs to support implementation/fixed price.

F19630-93-D-0001- SuperMini Computer Contract - Purchase hardware platforms for DMS implementation/fixed price.

F30602-91-D-0121 Rome Labs External Assistance III contract - Purchase integration support for X.400 messaging products.

DCA100-93-D0067 DISA CIM SETA Contract - Purchase technical and management support.

F01620-95-D-0001 DMS-GOSIP - Purchase hardware/software to implement X.400 messaging and X.500 Directory Services Air Force wide.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: None.
2. Schedule Changes: None.
3. Cost Changes: FY95 funding changes between the FY96 Budget Submission and this submission reflect a plus up of \$4.4M in 3400 funding and \$11.0M in 3080 funding by PBD 707. The FY96 and FY97 3400 funding increases are a realignment of reporting for long haul communications which include the Defense Data Network. OSD requested that AUTODIN funding be consolidated under the DMS-AF program.

FY 1997 President's Budget, Volume 1, O-1, BA 1, AG11, BA 2, AG21, BA 3, AG31/32 and BA 4, AG42

Procurement Program, Fiscal Years 1997 Budget Estimates, Other Procurement, Electronic and Telecommunications Equipment, Item # 55, Weapon System Cost Element 2.

E. System Description:

WIMS supports active, reserve, and guard Civil Engineering (CE) automated management applications in both engineering and operations areas. Engineering functions include project programming, design, and construction project management, environmental compliance, real property, and facility assessment. Operations functions such as work control, recurring work program, material acquisition, financial management, housing, fire department, personnel and readiness, and systems administration. WIMS consists of approximately 2.5M lines of code.

Besides WIMS, Service Information Management System (SIMS)/Base Contracting Automation System (BCAS) are migrating to the same open systems architecture. This nonproprietary operating environment will be located at the Regional Processing Centers (RPCs). Refer to ADP Operations Consolidation, AIS 181, Descriptive Summary for further details.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

Migration Status:

WIMS has been nominated by the Air Force as a candidate for an OSD migration system.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: Source code for WIMS was rehosted from the proprietary Wang platform over to and an open systems UNIX environment. The Air Nation Guard converted 104 sites from the Base Engineering and Management System (BEAMS) to a stand-alone PC-based SCO UNIX systems. The full UNIX base WIMS was established at Selfridge ANG and Tyndall AFB. The BEAMS automated information system was subsequently retired 1 Feb 95. Approximately 1.2M lines of code were transferred from HQ AFCEA to HQ SSG.

2. FY 1996 Planned Program: To facilitate standardizing all WIMS source code, a worldwide release of the complete WIMS object code is scheduled for release in Apr 96. This will establish SSG as the single point for WIMS sustainment and give the customer a needed tool for software and systems support. Efforts will continue in implementing the UNIX based systems to bases having appropriate hardware in-place and required LAN connectivity. HQ USAF/CE is funding hardware acquisition and implementation costs required for bases to prepare for LAN architecture. This initiative continues to move the system away from a proprietary WANG VS platform to an UNIX platform, making WIMS the ideal DoD engineering system.

3. FY 1997 Planned Program: Continue implementation of UNIX based WIMS to a regionalized environment. Implement those commercially developed products identified by the CE Automation Steering Group as directed by HQ USAF/CE, a Global Combat Support System initiative.

G. Contract Information:

1. HQ SSG/SBEE has a contract with TecMasters Inc. (TMI) to develop Computer Aided Instruction, develop an Automatic Identification Technology (bar coding) system, support deployed WIMS software modules, systems administration, and UNIX implementation for active, guard and reserve Air Force components.

2. Air Force Minicomputer Multi-User System (AMMUS)

3. Air For Desktop IV and V contracts

4. Navy Supermini contract program

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: No changes.

2. Schedule Changes: No changes.

3. Cost Changes: Additional Other Procurment, Air Force funding for FY96/97 will provide RPC capability to accommodate WIMS regionalization.

4. Cost To Complete: \$ 64.3 (in millions of dollars)

Note: Estimated costs are based on current information received from Martin Marietta/DISA proposal for platform migration. New numbers are consistent with current Major Automated Information Systems report submitted 30 Jun 95.

D. Cross Reference to Justification Books:

FY 1997 President's Budget, Volume 1, O-1, BA 4, AG41

FY 1997 Defense Budget Review, Defense Business Operations Fund, Information Services
Business Area, pages 147 - 174

E. System Description:

AFEMS drives equipment logistical decisions, across all commands, from base to Air Staff level for \$32 billion in equipment inventory and is the only source for total visibility of all Air Force equipment. Provides on-line equipment information upon which the major commands and the system program managers initiate operational support actions. Provides the capability to accurately develop and forecast time-phased equipment requirements, both additions and reductions, for all categories and applications of support equipment. Categories/applications include, but are not limited to, centrally procured, non-centrally procured, war reserve material, test, measurement, and diagnostic equipment, fixed communications-electronics equipment, industrial plant equipment, mission equipment, and vehicles. Provides the capability to support redistribution of both AFMC centrally procured equipment and base-funded equipment assets.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

Provides for worldwide equipment asset accountability and on-line closed loop asset visibility, from cradle to grave, of all Air Force assets regardless of location or application. Provides assessment information upon which equipment managers at all levels (base, MAJCOM, system program manager, and HQ USAF) can determine:

- 1) the impact of force structure changes;
- 2) the capability to evaluate peacetime/wartime operations plans by weapon system/organization;
- 3) the operational readiness based on equipment availability and need dates; and
- 4) the effect of material management decision on weapon system performance.

Migration Status:

AFEMS is migrating to a larger computer system platform and its functionality is being incorporated into the Depot Maintenance Standard System (DMSS), which is an OSD approved migration system.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: Continued operations and maintenance. Possible migration to a larger platform. Milestone III granted Jul 95.
2. FY 1996 Planned Program: FOT&E. Migration to a larger platform.
3. FY 1997 Planned Program: Sustainment.

G. Contract Information:

Martin Marietta - Prime - FFP
CENTECH-SETA/IV&V - FFP

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: System migration related changes and software changes. (i.e. the same migration to a larger platform mentioned in section F)
2. Schedule Changes: Driven by possible migration. (See section F)
3. Cost Changes: Program Acquisition, Life Cycle Cost, and Cost to Complete increased (in then year dollar's for FY96-01) to accommodate migration to a larger platform. This did not lead to any significant schedule changes. The Sunk Cost increased due to fall out funds received in FY95.

D. Cross Reference to Justification Books:

FY 1997 President's Budget, Volume 1, O-1, BA 1, AG11 and BA 4, AG42

E. System Description:

CAMS is the standard Air Force base-level automated maintenance information management system vital for effective and efficient management of weapon systems worldwide. The system will support all aircraft, communications-electronics, and support equipment maintenance activities at worldwide operating bases, Air National Guard/AF Reserve sites, and selected NATO locations. CAMS replaces existing manual maintenance data collection and maintenance work order systems by providing on-line remote terminals connected to the Standard Base-Level Computer (SBLC) system throughout the maintenance complexes. CAMS automates aircraft history, aircraft scheduling, and aircrew debriefing processes, and provides a common interface for entering base-level maintenance data into other standard logistics management systems. CAMS enhances the front-end design of new weapon systems and increases the readiness and sustainability of existing weapon systems by improving the availability, accuracy, and flow of essential maintenance, operational and supply information. This system is critical to the wartime readiness and operational support of aircraft, communications/electronics, missile maintenance,

Department of the Air Force
Descriptive Summary

and support equipment. CAMS provides the following current capabilities:

1. Automated Debriefing
2. Training/Personnel
3. CAMS/Supply Interface
4. Automated Scheduling
5. Comprehensive Engine Management System(CEMS)
6. Inspection/Time Change
7. Job Data Documentation
8. Status and Inventory Reporting
9. Asset Research
10. Specialist Dispatch
11. Operational Events

Standard System Group (SSG) is the Central Design Activity for CAMS.

1. Migration/Target System: CAMS is a legacy system that will be integrated into the Integrated Maintenance Data System (IMDS). IMDS is an information technology program to provide Air Force decision makers with the information they need about operational readiness. IMDS will improve the efficiency of sustaining operations within the United States Air Force by integrating multiple and diverse maintenance MIS into a single open system client/server network. This will enable IMDS to provide a single virtual data repository for access by all Air Force command levels. IMDS will also provide flightline and other point of maintenance productivity improvements, such as: elimination of duplicate data entry; Interactive Electronic Tech Manuals (IETM) with hypertext linking; smart diagnostics; improved and automated data collection via bar-code scanners. Portable Maintenance Aids (PMAs), voice input, etc.; and graphical windows TM-style screens. CAMS, REMIS, and Tactical Interim CAMS and REMIS Reporting System (TICARRS) are legacy maintenance systems that will be phased out when the IMDS system is on line and can sufficiently perform all functions required. Since the IMDS is still in prototype, a timeframe has not been established for phasing out the legacy systems. We currently plan to award the IMDS contract on 19 Jul 96.

Migration Status:

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: The Congressionally earmarked funding for CAMS was utilized to correct known functional deficiencies and to support implementation/training of Version 5R2/Generic Configuration Status and Accounting System worldwide. There were no funds for development/modification beyond FY95. Based on Congressional direction, the system will be maintained at a level of efficiency to assure that aircraft and other weapon system readiness is not compromised.
2. FY 1996 Planned Program: Sustainment
3. FY 1997 Planned Program: Sustainment

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

G. Contract Information:

CAMS is an Air Force written system and contract support is supplied for complex technical issues, software analyst/programming and documentation/configuration.

Unisys Corporation employees sustain and maintain the SBLC environment through contract number F01620-91-D-0003 Delivery Order(DO) 5363. The contract type is firm fixed price, indefinite delivery, indefinite quantity.

I-NET is a System Engineering and Technical Assistance (SETA) contract number F11624-92-D-0002 DO 6K70. The I-NET contract provides technical assistance through task order requests. Technical support provided by these commercial contractors is not available within the Air Force.

point of maintenance productivity improvements, such as: elimination of duplicate data entry; Interactive Electronic Tech Manuals (IETM) with hypertext linking; smart diagnostics; improved and automated data collection via bar-code scanners, Portable Maintenance Aids (PMA), voice input, etc.; and graphical windows TM-style screens.

Migration Status:

If a successful IMDS demonstration results in acceptance, it will be submitted as an Air Force candidate for an official OSD migration system.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: A draft Mission Need Statement (MNS) was approved 9 Nov 95. Five contracts were awarded in Apr 95 for a value of \$2.5M for concept studies and demonstrations. The IMDS program will continue support of the Armstrong Laboratories' Integrated Maintenance Information System (IMIS). Program Management Directive (PMD) was completed 19 May 95.

2. FY 1996 Planned Program: To be determined based on successful first quarter FY96 IMDS concept demonstration. RFP will be submitted in Mar 96.

3. FY 1997 Planned Program: To be determined based on successful first quarter FY96 IMDS concept demonstration.

G. Contract Information:

Existing contracts are for engineering and support services - MITRE Corp, Burlington, MA; and SenCom Corp, Bedford, MA. Contract type - T&M. Demonstration contracts were awarded Apr 95 to: Computing Devices International (CDI); Systems Research and Applications (SRA) Corp.; TRW, Inc., Systems Integration Group; LORAL Federal Systems Company, Inc.; and TASK, Inc. The five contracts awarded are \$500K each for a total of \$2.5M.

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: None.

2. Schedule Changes: This is a pre-Milestone 0 program. Due to start of the program in late first quarter FY95, the concept demonstration is expected to be completed during first quarter FY96.

3. Cost Changes: Increases in 3600 funding from FY95 to FY96 and beyond are a result of development of the test bed in FY96 and subsequent contract actions for the follow-on IMDS.

Procurement Program, Fiscal Years 1997 Budget Estimates, Other Procurement, Electronic and Telecommunications Equipment, Item # 55, Weapon System Cost Element 7

E. System Description:

FAMS is a fuels data collection/information management system that uses state-of-the-art microcircuit technology to automate the management and control of vital petroleum support operations. It addresses critical needs in managing USAF fuels; reduces the current 2 percent error rate in a \$3B annual fuels budget; reduces the risk of loss of life and property; reduces USAF fuels management manpower; and provides accurate information for war planning, which increases the USAF's ability to respond to threats. It will eliminate much of the paperwork and manual input in today's fuels management. Independent cost-benefit analysis shows FAMS will provide a total savings of \$161M when fully implemented.

FAMS consists of three hardware systems to collect fuels transaction and inventory data at base level (for service stations, storage tanks, and aircraft refueling), and information management systems to support three levels of users (base, MAJCOM, and Air Staff). The Automated Fuels

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

Service Station (AFSS) provides control and accountability of product issues at the military fuels service station. The system eliminates the need for service station attendants and manual transaction processing. Automated Tank Gauging (ATG) replaces the current system relying on a person, using a tape reel and paste, gauging each tank until he gets two consecutive readings within one eighth of an inch. The data is entered into a computer manually and there is virtually no visibility over inventory between daily gaugings. ATG provides continuous, reliable inventory control of bulk fuel through precise automated measurement of product level and temperature for approximately 2300 bulk storage, hydrant, and service station tanks. The ATG installation effort is concentrated into three separate regions, USAFE, CONUS, and PACAF. Automated Data Collection and Fuel Dispensing System (ADC/FDS), also known as the Microchip Project, will automatically collect fuel dispensing transactions as aircraft are refueled. The system will use radio frequency tags on each aircraft which will communicate billing data with a computer on the refueling equipment for near real-time capture of transaction data.

FAMS-B is the base level computer system that collects the transaction data from the AFSS, ATG, and ADC/FDS systems. This supports Base Fuels Management Office operations and is source data for the FAMS-A and C components. The future system concept calls for a communications and database server supporting 2 to 10 users (clients) at each base. FAMS-C will provide the MAJCOMs inventory, facility, equipment, and personnel status from each base's FAMS-B system. FAMS-A provides the fuels information needed by the Fuels Stock Fund managers at the Directorate of Aerospace Fuels (SA-ALC/SF) and the Air Staff Energy Management Office (HQ USAF/LGSSF). This system now serves as a central data repository for worldwide fuel transactions, and will support missile propellant item managers and the area laboratories. This system is a critical component to supporting decentralized billing for aviation fuel, since it captures and consolidates all worldwide transaction data for each wing's refuelings. It resides on an Ambahl mainframe computer at Kelly AFB TX. FAMS-B users can login to this system to view their transactions for billing validation. The system will be released in three increments.

The three data collection hardware systems mentioned above (AFSS, ATG, and ADC/FDS), referred to as Petroleum Resource Automated Management (PETROL RAM) projects, are accomplished by the PETROL RAM Office at SA-ALC/SFF, Kelly AFB TX. FAMS-A development is accomplished by OL-AE MSG/SA, Kelly AFB TX. The overall program oversight along with FAMS-B development is provided by the FAMS PMO at HQ SSG/LGSF Gunter Annex, AL.

Migration Status:

FAMS has been selected as an OSD migration system under the Defense Fuels Automated System (DFAS). FAMS will be the retail portion of the DFAS system.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: The Pacific ATG contract proposals were identified as containing significant deficiencies despite clarification requests. The Source Selection Authority determined it is in the Government's best interest to discuss the deficiencies with each offeror before proceeding with the source selection process. Contract Award Date is still to be determined. To date, 7 ATG sites and 123 tanks have been installed in USAFE, and 62 sites and 491 tanks installed in CONUS. In addition, 190 AFSS systems have been installed worldwide. The Barksdale Fuels Management account declared the FAMS-B fuels accounting, capability

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

assessment, and the automated fuels control center fully operational. Accordingly, on 20 Nov 95 at approximately 1200 hours local, the FAMS Program Office declared the system to be Initial Operational Capable.

2. FY 1996 Planned Program: FAMS-A Increment I and FAMS-B Increments I and II complete Qualification Operational Testing and Evaluation and implement world wide. AFSS Phase II contract will be completed Mar 96 and USAFE ATG will be complete Jun 96. ADC/FDS Contract Award is scheduled to be completed by Apr 96.

3. FY 1997 Planned Program: FAMS-B Increment I and II will be Final Operational Capable in Feb 97. CONUS ATG will be completed in Aug 97.

Contract Award: Jul 94
Contract Type: Time & Material
Duration: Sep 94 - Sep 97
Est Contract Value: \$1.6M

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: N/A

2. Schedule Changes: Milestone schedules will be pushed back to accomodate delay in contract award for PACAF ATG. Funding cuts will force the overall program into a longer implementation schedule because site surveys and implementation teams will not have the necessary TDY funds.

3. Cost Changes: The numbers reported the FY95 previous submissions were incorrect. The numbers reported in this submission are based on the Life Cycle Cost Estimate dated 15 Oct 94 with a base year of 1989. FY95, FY96, and FY97 changes reflect a rephasing of Other Procurement, Air Force funding.

4. Cost To Complete: \$ 156.7 (in millions of dollars)

Note: The Life-cycle cost figures in para C includes O&M costs, development costs and estimates of program office support for the period 1987 through 2004. Program cost estimates were obtained from an independent cost estimate performed by AFMC/SZX. This figure also includes estimates of program office support. The period of development is FY95 through FY96.

D. Cross Reference to Justification Books:

FY 1997 Budget Estimate Submission, Volume 1, O-1, BA 4, AG41

FY 1997 Defense Budget Review, Defense Business Operations Fund, Information Services
Business Area, pages 147 - 174

E. System Description:

The Tactical Interim Core Automated Maintenance System (CAMS) and Reliability Maintainability Information System (REMIS) Reporting System (TICARRS) is an Air Force-wide contractor operated and maintained management information system. In 1979, the Air Force determined that a system should be developed for aircraft operations, maintenance, and configuration management at the unit level. The system would provide maintenance information vital for effective and efficient management of the F-16 aircraft world-wide. The system was designed, built, tested, and implemented by Dynamics Research Corporation (DRC), Andover, MA. The system has been in use providing maintenance data collection and reporting capability to the Air Force since initially delivered in 1979, and now encompasses the F-15 aircraft fleet in

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

addition to the F-16s. The system, initially called the F-16 Centralized Data System (CDS), was renamed the TICARRS and is now managed by the TICARRS PMO. DRC also was contracted by the Air Force to develop a similar capability for the then classified F-117A aircraft. This system was called the Smart Data System (SDS). The SDS capability and other enhancements, referred to as TICARRS-92, were demonstrated to the Air Force by DRC at Seymour-Johnson AFB NC in FY93. That demonstration identified the need for additional functionality and interfaces prior to implementation in the operational environment. The current program strategy is to enhance the existing TICARRS to provide direct base-level data-entry to the centralized database (today, data is input via interface with the CAMS) and to support the F-117 aircraft community in addition to the F-15 and F-16 communities. This will provide the various users, including operations, maintenance, support and program management agencies, with "real time" comprehensive information to improve operational readiness and effectively meet mission. This new version is referred to as enhanced TICARRS.

The major functions of the TICARRS are collecting and reporting data. The enhanced TICARRS will implement these functions by automating Air Force forms provided as on-line screens. Data entered on these screens will be edited according to standard Air Force edits and will then be integrated into the TICARRS database. The enhanced TICARRS will provide the following specific capabilities:

1. Equipment Operational Requirements
2. Equipment Reliability and Maintainability Measurement
3. Automated Test Equipment (ATE) Operational Requirements
4. Logistics Data
5. Manpower and Training Management
6. Generalized User Support
7. System Control Information
8. Query System Capability
9. Interface to other systems

The FY 1994 DoD Appropriations Act, Public Law 103-139, approved 11 Nov 93, identified \$15.5M for the enhancement, operations, and support of TICARRS-92. Further, it directed that TICARRS-92 be reestablished with direct maintenance data input, as the supporting system for 1) one wing each of F-15, F-16, and F-117A aircraft no later than 31 May 94, and 2) all F-15, F-16, and F-117A aircraft no later than 31 Aug 94. Due to the urgency of the requirement, the Air Force planned on a sole source contract action for the development and implementation of TICARRS-92. This anticipated contract action was protested by another contractor and resulted in the slippage of the contract action to FY95. Due to present funding constraints and potential future program direction, the Air Force structured the contract to include a Phase I and II development effort, an initial implementation phase, a follow-on implementation phase, and an FY95 O&M effort. Phase I of the development includes system development through System Validation Review (SVR) including support for Air Force validation testing. Phase II includes development of the remaining required TICARRS enhancements that were not developed under Phase I. Phase II also includes first site implementation and operation test support.

Materiel Systems Group (MSG) is the Central Design Activity for TICARRS.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

Migration Status:

Current plans are for TICARRS/CAMS/REMIS to eventually migrate to the Integrated Maintenance Data System (IMDS). Schedule requirements will depend on the IMDS concept demonstration evaluation.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: Continued maintenance data collection support for the F-15 and F-16 aircraft fleet as noted in the preceding paragraph. Continued the Phase I development effort for the enhanced TICARRS. Phase I enhancements include additional system interfaces and transition from a batch to an on-line system. The on-line system will provide "real time" comprehensive information to improve operational readiness and effectively meet mission requirements.
2. FY 1996 Planned Program: During FY96, the schedule is to complete Phase I development and maintain the existing system.
3. FY 1997 Planned Program: Sustainment. When the IMDS becomes operational, it will subsume TICARRS functionality.

G. Contract Information:

1. Prime Contractor: Dynamics Research Corporation (DRC)
2. Involvement: Development and operations and maintenance
3. Type of obligation: Firm fixed-price (FFP)
4. Length of contract:
 - a. Development/Implementation: Options through 97
 - b. Operations and Maintenance: Options through 97
5. Delegation of Procurement Authority: Nunn-Warner Exempt - DPA Not Required.
6. Contract Performance: On schedule

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: There have been no technical changes.
2. Schedule Changes: The Air Force had originally planned on awarding a development contract in FY94; however, due to another contractor's protest of this action, award of the contract was not accomplished until FY95. The major contractual action initiated and accomplished in FY94 was the O&M contract for the existing system. During FY95, two development options were exercised, as well as an option for O&M support for the existing system. The current plans are to compete Phase I development effort and continue O&M of the existing system during FY95. During FY96, the schedule is to complete the Phase II development and test and implement the system. The existing system will continue to be maintained during FY97.
3. Cost Changes: In accordance with Public Law, otherwise expiring FY94 funds were available for use in FY95, for the period of the protest-caused delay, to fund FY95 development options. This had the effect of reducing the overall FY95 funding requirement for the TICARRS program. However, FY95 schedule adjustment mentioned above results in an increase to the life cycle cost and cost to complete. The sunk cost resulted in an increase due to the addition of the actual FY95

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

Dollars expended. The reduction in current services funding from FY95 to FY96 is based on planned implementation of the fee-for-service approach. The system user community will become responsible for funding program operations and enhancement requirements in FY97 and beyond.

FY 1997 Budget Estimate Submission, Volume 1, O-1, BA 4, AG41

E. System Description:

Ammunition Management Standard System (AMSS) is being developed to improve, standardize, and integrate ammunition management business functions and data across the DoD. It directly supports the goals of the DoD Logistics Strategic Plan (1994 Edition) to: reduce logistics response times; provide total asset visibility; develop seamless logistics systems; and streamline the logistics infrastructure. In order to accomplish this, the Joint Logistics Systems Center (JLSC) has been working with the components for the last 3 years. In this effort the current business processes are being evaluated and improved processes identified using this information, a strategy to develop and deploy a standard system, AMSS, consisting of the functionality currently found in the Navy's Conventional Ammunition Integrated Management System (CAIMS), augmented with functionality for other ammunition management systems and new functionality being reviewed for approval. The near term objective is to implement the first release of AMSS at an initial operating

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

site by mid-1997. Subsequent implementations at up to seven additional sites would take place over the next 12 months. Implementation of the second release of AMSS, with enhanced functionality, would begin once the first release was fully implemented. Other activities that require access to DoD ammunition management data will be added as the need arises and funding becomes available. When completely developed, integrated and implemented AMSS will support the functionality for all ammunition management at the national (wholesale) level. At this time several legacy systems currently provide unique ammunition management functionality for the DoD. Many of these legacy systems have been evaluated to determine the appropriate strategy for including the functionality in the AMSS. Other legacy systems are still being evaluated to determine how best to provide the services with the needed functionality -- either through inclusion in the standard system or through interfacing with service-unique systems.

Migration Status:

None

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: At the conclusion of the "fly off" competition between three Defense Enterprise Integration Services (DEIS) contractors (an FY 94 project), a down-selection was made for the follow-on development of AMSS. BDM Federal was awarded the contract for AMSS development based on their superior performance and demonstrated abilities during the "fly off." Comparison studies were completed to identify areas of redundancy between AMSS and the Materiel Management System (MMS), another system being developed by the JLSC. Additional business process modeling took place to refine in greater detail the functional requirements of AMSS. The initial deployments of ABMS were completed to the Navy, Air Force, and Marine Corps.

2. FY 1996 Planned Program: Development of AMSS will continue. The reverse engineering of CAIMS, begun with the FY95 award of the AMSS follow-on development contract to BDM, the primary objective for FY96. Initial testing of the first release of the standard system will begin towards the end of the fiscal year. Additional functional requirements analysis will be made to identify enhancements that need to be made to AMSS following its initial release. Efforts will also be undertaken to determine additional functionality that can be added to AMSS which will allow it to perform functions currently performed by separate ammunition depot-level management systems and potentially retail-level systems. Interfacing AMSS with elements of Materiel Management System (Configuration Management Information System (CMIS), Deficiency Reporting System (DRS), Provisioning Cataloging Technical Support System (PCTSS) and Product Definition Support System (PDSS)) will also be explored in an effort to further reduce redundancy.

3. FY 1997 Planned Program: Fielding of the first release of AMSS will begin. Development of the second release of AMSS, with enhanced functionality will begin. Additional requirements studies will be completed to determine business process improvements that can be incorporated in future releases of AMSS. The Army component has Inventory Control Points (ICP) at Rock Island, IL and Huntsville, AL. The Navy ICP is NOC/IMSD at Mechanicsburg, PA. Air Force ICPs are at OO-ALC at Hill AFB, UT; WR-ALC at Warner Robins AFB, GA; and SA-ALC at Kelly AFB, TX. The Marines ICP will be MARCORSYSCOM in Arlington, VA. JOINT/ALL ICP will be at Pentagon, Washington, DC. All scheduled IOC dates are TBD. Joint Staff, OSD, and Service Headquarters in the Washington, DC area.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

G. Contract Information:

The DEIS contract with Defense Information Services Organization comprises the majority of the contractual efforts. The prime contractor is BDM Federal.

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: The decision to implement AMSS at a single DISA Megacenter is being reviewed based on system-wide performance considerations. Rather than implementing AMSS in a mainframe computing environment, it may be more economical to implement it on mid-tier platforms. A final decision on the technical architecture is awaiting recommendations from the development contractor. Their recommendations should be made by the end of the second quarter of FY96. JLSC will continue to focus on development of applications in the AMSS. The DEIS contractors will continue to develop the AMSS applications to support joint DoD requirements. This includes process changes required by a joint service defined functional baseline, the Improved Functional Baseline (IFB), data element changes to support data standardization efforts, life cycle management of business processes/systems (i.e., joint AMSS life cycle documentation, business process re-engineering, program control, etc.)

2. Schedule Changes: Implementation of AMSS starting in Jan 97 has been delayed because of delays in awarding the follow-on development contract, with the assumption that funding is available for Service hardware. The services are in the process of identifying additional sites where AMSS should be fielded.

3. Cost Changes: A requirement for additional funding for deploying AMSS was identified for inclusion in the FY97 JLSC budget. This additional funding is required to ensure hardware is available to operate AMSS once software development is completed, to provide program management support that was not identified earlier, and to fund for organic personnel assigned to the JLSC to manage the AMSS program. This request for additional funding was not approved in the last POM submission cycle, therefore it will be re-submitted for consideration as part of the JLSC's FY98 POM request.

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

A. ITR Title and Number:
REQUIREMENTS DATA BANK (RDB)
004

B. CIM Functional Area:
LOGISTICS

C. Life Cycle Cost and Program Cost:

1. Then year (Inflated) dollars

Approved Life-cycle cost:	\$ 558.2	(in millions of dollars)
Estimated Life-cycle cost:	<u>\$ 431.9</u>	(in millions of dollars)

Approved Program cost:	\$ 237	(in millions of dollars)
Estimated Program cost:	<u>\$ 230.3</u>	(in millions of dollars)

2. Constant base year (FY 1994) dollars

Approved Life-cycle cost:	\$ 578.1	(in millions of dollars)
Estimated Life-cycle cost:	<u>\$ 443.9</u>	(in millions of dollars)

Approved Program cost:	\$ 268.1	(in millions of dollars)
Estimated Program cost:	<u>\$ 261.6</u>	(in millions of dollars)

3. Sunk Cost (actual): \$ 263.8 (in millions of dollars)

4. Cost To Complete: \$294.4 (in millions of dollars)

Note: Additional Information on Life Cycle Cost and Program Cost:

The estimated life-cycle cost in Section C reflects approved amount as of Milestone III AFCAIG, Sufficiency Review, May 93, with the deletion of Computer Program Configuration Items (CPCIs) Recoverable Item Stratification and Repair. The Joint Logistics Systems Center (JLSC) has chosen not to continue these efforts at this time. The dollar amount includes all (development, test, organic, support & maintenance) cost for FY84 through FY02.

The estimated program cost in Section C reflects the amount approved by 13 May 94 signing of Acquisition Program Baseline (APB) by SAF/AQ with the JLSC's Feb 94 decision to withdraw Central Secondary Item Stratification (CSIS) funding. The dollar amount is for development and hardware requirements. Maintenance and organic funding amounts are not included.

The sunk cost in Section C includes all cost (development, test, organic, support and maintenance) incurred FY84 through FY95. The cost to complete in Section C is based on the assumption that the JLSC will supply the missing functionality and implement Recoverables CPCI.

The cost to complete estimate covers FY96 through FY02.

Business Area, pages 147 - 17

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

E. System Description:

The RDB is a major software development effort to correct deficiencies in the requirements computation process and provide the capability for the Air Force to relate logistics resource decisions to weapon system combat capability. The RDB objectives and required capabilities focus on providing more accurate and timely information for strategic planning, forecasting, management directions, and operational control of logistics resources. The current materiel requirements data systems originated in the late 1950s and early 1960s. They are technologically archaic, supported by antiquated hardware and application software. To correct these deficiencies, RDB will define, design, develop, test, operate, and maintain a modern materiel requirements system which will replace the current unsatisfactory systems for the Air Force Materiel Command (AFMC) (formerly Air Force Logistics Command (AFLC)) materiel requirements process. RDB supports the materiel management Defense Business Operation Fund (DBOF) business area. The RDB was to replace 19 current systems and manual processes using an evolutionary, building block approach. RDB will compute and stratify requirements for spares, consumables, and equipment items; determine budget projections; measure force readiness; and assess policy changes. It will allow the user to accomplish on-line file maintenance and data query as well as view displays of current data, thus reducing paperwork and increasing data visibility. Requirements will be driven by weapon system management (WSM) goals. By collecting and managing item and weapon system data, the requirements determination/computation, inventory stratification/forecasting, buy/repair decisions, and execution tracking will all be done at the weapon system level. The end result will be data that enables decisions which maximize readiness and sustainability within specific cost goals. Information generated will be used to develop Program Objective Memorandum (POM)/budget submissions as well as program, allocate, and reprogram funds. In addition to providing weapon system management capability, RDB will incorporate other required system policy and management changes that have been identified but deferred until they could be included in the modernization effort.

Materiel Systems Group (MSG) is the Central Design Activity for RDB.

Migration Status:

The Requirements Data Bank (RDB) will be functionally incorporated into the Materiel Management Standard System (MMSS), which has been approved by OSD as a migration system. The following Computer Program Configuration Items (CPCIs) from the RDB have been selected for migration:

D200E - Requirements Item Identification Data (RIID). RIID consolidates and formats catalog data from the Master Item Identification Control Systems (D043) into a single source of data for the RDB applications. This subsystem provides on-line terminal screen data retrieval and support capability to all user levels, as well as a mechanized interface with the other RDB areas.

D200F - Applications, Programs, and Indentures (API). API provides a repository of indentured item application data and weapon system force structure program activity. The indenture structure contains components and next higher assemblies, allowing both top-down and bottom-up traversing of weapon system and end-item relationships.

D200H - Initial Requirements Determination System (IRD). IRD computes spares requirements for new weapon systems, equipment and modifications. It provides real-time on-line management support for management data retrieval, factor updates, analysis, as well as automatically accepting and processing new item data from provisioning activities.

D200J - Special Tooling/Special Test Equipment System (ST/STE). This subsystem provides an

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

on-line system for maintaining a record of government owned tooling and test equipment in storage at contractor and government facilities. The subsystem also provides inventory assets, movement and disposal status of special tooling/special test equipment required to support a weapon system.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: All authorized development has been completed. The JLSC has not identified joint materiel management requirements for MAISRC approval as directed in the RDB Milestone III System Decision Memorandum, 18 Aug 93. Development and deployment of additional RDB products may commence after the material management requirements are defined.
2. FY 1996 Planned Program: Sustainment. Note: The cost to complete in Section C is based on the assumption that the JLSC will supply the missing functionality and implement Recoverables CPCI. The cost to complete estimate covers FY96 through FY02. Sustainment. See Cost Notes.
3. FY 1997 Planned Program: Sustainment. Note: The cost to complete in Section C is based on the assumption that the JLSC will supply the missing functionality and implement Recoverables CPCI. The cost to complete estimate covers FY96 through FY02. Sustainment. See Cost Notes.

G. Contract Information:

BDM (Prime Contractor): Development Contract F33606-84-C-0010 was awarded as a Cost Plus Award Fee (CPAF) contract to the BDM Corporation in Jan 84 and as a Fixed Price Incentive (FPI) contract in Sep 88. Prime contractor performance for FY 94 was completed under budget. The contract was completed 31 Mar 95. A contract for the transition and turnover of RDB from Contractor development to Government maintenance, F19628-95-C-0384, was effective 1 Apr 95. Atlantic Research Corporation (ARC) was awarded a Task Order under the Information System Engineering, Prototype, and Development (ISEPD) Task Order contract to provide IV&V for the RDB development contractor for FY90, FY91, and FY92. Contract F33657-93-C-2167 was awarded 16 Mar 93 for FY93/94 as Firm Fixed Price. Contractor's name was changed to CSC on 1 Jan 94. Work under this contract was completed during Nov 94. RCF (formerly Rogers, Carol, and Ferguson) was awarded a Firm Fixed Price (FFP) contract F33600-89-0030 to install and maintain an office information system (OIS) and provide senior logistics analyst support to aid the RDB program office. This contract terminated 30 Sep 93. International Computing and Engineering Service (ICES), Contract F33657-93-C-2397, was awarded a Task Order to install and maintain an OIS and provide senior logistics analyst support. This contract was effective 11 Jan 94.

3. Sunk Cost (actual): \$ 0 (in millions of dollars)

4. Cost To Complete: \$ 0 (in millions of dollars)

Note: Life-cycle and program costs are not available due to the program's age. SBSS has been in the maintenance phase of its programmed life cycle since 1985.

D. Cross Reference to Justification Books:
FY96/97 President's Budget, Volume 1, 0-1, BA 1, AG11, BA 2, AG21, and BA 3, AG31 and 32

E. System Description:

The Standard Base Supply System (SBSS) is a base-level supply management system, whose mission is to provide timely supply support to base-level activities during peace and war. The SBSS maintains an elaborate vertical interface with the DoD, NATO, AF Wholesale Supply System and the national supply systems. The management of commodities also requires extensive horizontal interfaces with such base-level functions as maintenance, contracting, accounting and finance, and transportation. Additional interface systems include the Military Standard Requisitioning and Issue Procedures (MILSTRIP) and the Air Force's Recoverable Assembly Processing Management System (RAMPS). SBSS uses standard automated inventory control policies and programming techniques to manage a wide range of retail commodities, including supplies, equipment, fuels, and war reserve materiel for both active and reserve components of the Air Force. Computer support and financial accounting for the host and its supported satellite accounts are accomplished in a single computer configuration. Under the satellite concept, records of a satellite activity are integrated with the host computer records and are updated via remote

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

terminals. SBSS processes on the UNISYS 2200 mainframe computer. Users and developers utilize a full range of personal computers and dumb terminals. The current environment utilizes Common Business Orientated Language (COBOL 85), Ada and META Assembler (MASM) programming languages, with the primary being COBOL 85. All software is provided by the Standard Systems Group (SSG).

Migration Status:

SBSS has been nominated by the Air Force as a candidate for an OSD migration system.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: Conducted IDEF modeling (process and data) for the entire retail supply system. Data modeling was limited however, and more work needs to be accomplished in this area. Data elements were submitted to the DDRS.

2. FY 1996 Planned Program: Sustainment of SBSS utilizing the approved funded base-line. Initiation of SBSS modernization under the Base Level System Modernization (BLSM) Program, now called Global Combat Support System-Air Force (GCSS-AF). Information generated from the IDEF models will be used in concert with BLSM II modernization efforts. Funding for this effort will be provided by the GCSS-AF Program.

3. FY 1997 Planned Program: Continued sustainment of SBSS utilizing the approved funded baseline. Continued SBSS modernization under GCSS-AF.

G. Contract Information:

UNISYS contractual support provides two software analyst/programmers to perform research and provide guidance to SBSS personnel on complex technical issues encountered in application software development and configuration. This commercial contractor provides uninterrupted computer support for the SBSS which is not available with the Air Force. The hardware and software for this system was developed by UNISYS. The contract is firm-fixed price.

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: None

2. Schedule Changes: See #3 below.

3. Cost Changes: A FY96 program restructure shifted the funding to the outyears (into FY98) and delayed procurement of replacement equipment in PACAF. The SBSS approved baseline does not include implementation/maintenance funding for components modernized under GCSS-AF such as the Supply Ordering and Sourcing System.

C. Life Cycle Cost and Program Cost:

1. Then year (Inflated) dollars

Approved Life-cycle cost:	\$ 38.2	(in millions of dollars)
Estimated Life-cycle cost:	<u>\$ 38.2</u>	(in millions of dollars)

Approved Program cost:	\$ 38.2	(in millions of dollars)
Estimated Program cost:	<u>\$ 38.2</u>	(in millions of dollars)

2. Constant base year (FY 1995) dollars

Approved Life-cycle cost:	\$ 37.4	(in millions of dollars)
Estimated Life-cycle cost:	<u>\$ 37.4</u>	(in millions of dollars)

Approved Program cost:	\$ 37.4	(in millions of dollars)
Estimated Program cost:	<u>\$ 37.4</u>	(in millions of dollars)

3. Sunk Cost (actual): \$ 15.6 (in millions of dollars)

4. Cost To Complete: \$ 22.6 (in millions of dollars)

Note: Reference Life-cycle cost above, the program is based on a "neutral cost" MNS (USAF 004-94, Modernized Air Force Military Personnel Data System, ACAT Level IV). The program will be funded using projected O&M and procurement dollars. Life-cycle costs of the program will be realized through savings obtained from reduced costs associated with getting off the expensive mainframe based legacy system and eliminating the cost of maintaining the legacy system. No new monies provided.

D. Cross Reference to Justification Books:

FY 1997 President's Budget, Volume 1, O-1, BA 4, AG42

FY 1997 Amended Budget Submission, Other Procurement Air Force, Electronics and Telecommunication Equipment (Exhibit P-40), P-1 Line Number 52, Item Number 27

E. System Description:

Modernizing the Personnel Data System (PDS) is essential to continued personnel service to the Total Force (Active Duty, ANG, AFRES and Civilian). This initiative will update and modernize the PDS in order to facilitate interoperability with other functions and comply with SECDEF direction that all major military data systems move to an open systems environment no later than 1998. MNS USAF (004-94) was approved on 26 Apr 95.

The personnel community is tasked to ensure that the USAF maintains a robust and flexible

Department of the Air Force
Descriptive Summary
FY 1997 Budget Estimates

military force that possesses certain unique capabilities and can accomplish a number of missions. These responsibilities include the ability to manage strength levels in an effective and efficient manner which provides a highly qualified and motivated group of people who are trained and properly distributed to ensure quick response and effective operations in a global environment.

Changes to public law, mission, and basing structure are resulting in increased demand for the PDS to have more depth of reporting and increased accuracy when accounting for members supporting missions while in TDY status. Currently the PDS cannot perform all of the required tracking and reporting being asked of the personnel community.

The hiring of the temporary workforce and shifting personnel to modernization efforts is underway and will continue as training and functional reviews are accomplished. Modernization of the PDS to an open systems environment using data that complies with DoD standards should be completed by the end of FY97 to position the Air Force personnel system for potential movement to a yet-to-be determined target system for DoD human resource management.

Migration Status:

The Modernized AF PDS is the base level Personnel Data System migration system.

F. Program Accomplishments and Plans:

1. FY 1995 Accomplishments: The procurement of the primary platforms for system development was completed. The start-up temporary technical services were obtained. They will remain in place as required through Initial Operating Capability (IOC).
2. FY 1996 Planned Program: Full program development underway. All functional applications development and functional reviews will be defined and scheduled.
3. FY 1997 Planned Program: IOC targeted for end of FY97.

G. Contract Information:

Not Applicable

H. Comparison with FY 1996 Descriptive Summary

1. Technical Changes: N/A (New program)
2. Schedule Changes: N/A (New program)
3. Cost Changes: FY97 increases reflect program planned program development schedule. Full operating capability targeted for end of FY97.

E. Contract Data:

- (1). Contract awarded to: AT&T Technologies, Inc
- (2). Contract Award Date: 28 Oct 1988.
- (3). Brand name(s) and model number(s) of primary hardware and software:
Hardware:
AT&T 3B2/600G/600GR (TEMPEST and NON-TEMPEST)
Workstation: Color Graphics (386/486 Workstations)
Printers: Laser and Impact
Communication: STU-III Modem and Multi-Network Processor
Software:
Operating System: Unix System V Rel. 3.2 and 4.0
Relational DBMS: Unify, ORACLE, and Informix
Compilers: COBOL, C, Ada, FORTRAN, Pascal, and Basic
Office Automation: PRELUDE
Communications: GOSIP Wide Area Network, NFS, DDN Compression Source Code,
Networking TTY Interface
- (4). Contract duration (in years): 2 primary yrs.
- (5). Contract renewal options: Three one-year options for purchase, plus three additional one-year options for software, maintenance, support, and spare parts. Extended an additional 18 months for purchase of hardware and training.
- (6). Estimated value of contract: \$ 1074 million
- (7). Minimum obligation by FY: N/A

Exhibit 43(IT-3) Requirements and Indefinite Delivery/Quantity Contract(s)

DEPARTMENT OF THE AIR FORCE
FIP Resources Requirements and Indefinite Delivery/Quantity Contract(s)
Lead
FY 1997 Budget Estimates

A. Contract Name: UNIFIED LOCAL AREA NETWORK (ULANA II)

B. Description of Contract: This contract will provide local area network hardware and software components. These components will permit interconnectivity and interoperability between mainframe computers, minicomputers, workstations, and terminals from different vendors by using standard protocols. Network operating and management systems will be acquired to allow efficient management and control of ULANA-II based networks.

C. Contract Number: F34608-94-D-0011

D. Estimated Contract Requirements by appropriation: (\$000)

	<u>FY 1996</u>	<u>FY 1997</u>	<u>FY 1998</u>
Procurement	2379	2303	2313
O & M	1346	1644	1717
TOTAL	3725	3947	4030

E. Contract Data:

- (1). Contract awarded to: EDS. (Note: dual contract F34608-94-D-0008 was awarded on 16 Dec 94 to TRW Inc., Systems Engineering & Development Div., but is still under protest.)
- (2). Contract Award Date: 16 Dec 1994.
- (3). Brand name(s) and model number(s) of primary hardware and software: The ULANA II contract will have a plethora of network hardware and software from such vendors as Cabletron, Cisco, Fore Systems, Microsoft, Novell, etc.
- (4). Contract duration (in years): 2 primary yrs.
- (5). Contract renewal options: Two one-year options for all CLINs, with one additional year for all CLINs except for components.
- (6). Estimated value of contract: \$ 860.4 million
- (7). Minimum obligation by FY: N/A

CHANGES FROM 1996/1997 BIENNIAL BUDGET ESTIMATES

CDAs at Standard Systems Center (SSC) and Communications Systems Center (CSC) , last year combined under Headquarters Air Force Material Command (AFMC), are shown separately in this submission.

NOTE:

The work year figures listed for Material Systems Group (MSG) and Standard Systems Group (SSG) are only for individuals directly assigned to the respective Automated Information System (AIS) programs/initiatives. The next submission will reflect the total work year, i.e., overhead, redistribution to individual AISs for each CDA. Refer to USAF Defense Business Operations Fund, FY 1997 President's Budget, March 1996 for the work year totals for MSG and SSG.
